

EDWARD ANTHONY ESCUDERO BOWIE

Staff-Level Full-Stack Engineer | Founding CTO | Systems Architecture · SaaS · AI Infrastructure

Medellín, Colombia | kaytechventures@gmail.com | (+57) 316-104-6252 | (+57) 315-512-2988 | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Founding engineer and staff-level full-stack engineer with 6+ years of experience taking SaaS, AI, payments, and Web3 products from concept to production. Owns architecture, data models, backend services, frontend delivery, infrastructure, deployment, and live maintenance across products like Foldly and NeverForget while leading cross-functional execution. Highlights include 40% load-time improvements, \$1M+ in blockchain transactions processed, and \$50K+ in platform revenue generated after delivery.

TECHNICAL SKILLS

Architecture & Systems: Distributed systems design, API architecture, database modeling, background jobs, scalability planning, security-conscious engineering

Backend & Data: Node.js, PostgreSQL, Supabase, Drizzle ORM, MySQL, REST APIs, WebSockets

Frontend: Next.js, React, TypeScript, Tailwind CSS, Vite, Zustand, React Query, Redux

AI & Automation: LLM APIs, AI workflows, prompt engineering, ingestion pipelines, resilient fallback-oriented processing

Cloud, Auth & Payments: Vercel, Clerk, Mailgun, Gmail OAuth, Cloudflare R2, Upstash Redis, Stripe, OAuth

Web3: Reown AppKit, wagmi, ethers, Anchor, Solana web3.js, Polygon/EVM integrations

PROFESSIONAL EXPERIENCE

Frontend Developer to Head of Development | Related Ventures

Jan 2025 - Present

Initial contract through external staffing partner, later expanded into related-venture leadership · Remote

- Started on Memecoin.org through an external staffing partner, then architected and shipped a Web3 platform from scratch using Next.js, supporting 1,000+ daily transactions with smart-contract and wallet connectivity.
- Improved load times by **40%** through code-splitting, optimized data fetching, and performance-focused frontend architecture.
- Defined core data models, contract-interaction patterns, and technical foundations for scalability and transaction reliability.
- Earned expanded technical ownership, head-of-development responsibilities, and equity participation across related ventures after consistently delivering architecture, performance, and product outcomes.

Core stack: Next.js, TypeScript, Node.js, Vite, Web3.js, smart contracts

Initial project context: memecoin.org

Co-Founder & CTO | Foldly

Feb 2025 - Present

Independent venture · Remote

- Served as founding engineer / technical co-founder, owning the translation of product vision into shipped architecture, roadmap, and implementation across the full platform.
- Designed and built Foldly from scratch as a production document-intake SaaS with anonymous and branded upload links, authenticated dashboards, AI-assisted document processing, inbound email ingestion, Gmail historical import, and a three-tier large-download pipeline.
- Owned the system end to end across product definition, schema design, backend services, frontend implementation, integrations, infrastructure, deployment, and ongoing production maintenance.
- Solved key reliability challenges including secure external uploads, durable background processing in a serverless environment, large-download handling beyond platform limits, and fallback-oriented AI ingestion for encrypted and image-only PDFs.
- Built and now maintain a production codebase spanning roughly **147k** TS/TSX lines across **753** files, with a **22-table** PostgreSQL schema, 10 modules, 10 API routes, 13 app routes, 98 components, and 4 cron workers, while leading execution across the COO and UI/UX teammate.

Core stack: Next.js, TypeScript, PostgreSQL, Supabase, Drizzle ORM, Clerk; Mailgun, Gmail OAuth, Upstash Redis, Cloudflare R2; Vercel

Platform: foldly.com

Co-Founder & CTO | NeverForget

Feb 2025 - Present

Independent venture · Remote

- Served as founding engineer / technical co-founder, owning product definition, system design, implementation, and production delivery from the ground up.
- Built the full application foundation end to end, including landing pages, authentication, onboarding, dashboard experience, billing flows, AI-powered gift recommendation workflow, supplier integrations, notifications, and deployment.
- Designed the automation and decisioning architecture for production gifting workflows, including AI selection, supplier routing, off-session payments, timed approval logic, delivery tracking, and fallback behavior when physical fulfillment is at risk.
- Delivered a production-ready platform across frontend, backend, data model, integrations, and infrastructure, spanning roughly **14.8k** TS/TSX lines across **288** files and a 6-function Inngest workflow pipeline.

Core stack: Next.js, TypeScript, PostgreSQL, Drizzle ORM, Clerk, Stripe; Inngest, Moonshot Kimi K.2 via NVIDIA; Goody, Tremendous, Resend, Vercel

Platform: never-forget-zeta.vercel.app

Head of Development & CTO | Throu S.A.S

Mar 2022 - Jan 2026

Part-time contract · Remote

- Co-founded and built the application platform from scratch, owning implementation across the product experience and application layer while collaborating on smart-contract planning and integration.
- Delivered public product pages, marketplace and project-detail flows, authenticated investor dashboard, portfolio views, multilingual UX, and wallet-connected investment flows.
- Implemented the Polygon/EVM contract-integration layer and helped ship a multichain EVM/Solana architecture, including Reown AppKit wallet flows and Anchor-based Solana support.
- The platform went on to generate **\$50K+** in revenue after delivery.

Core stack: Next.js, TypeScript, Clerk, next-intl; Reown AppKit, wagmi, ethers; Anchor, Solana web3.js, Polygon/EVM integrations

Platform: throu.app

Web Developer | Gunny Games

Nov 2023 - Nov 2024

Freelance contract · Remote

- Built a gamified platform with token-based rewards serving **600+** active users and integrated blockchain-powered progression.
- Improved load speeds by **35%** through performance audits, refactoring, and database optimization, and implemented real-time rewards features.

Core stack: Next.js, TypeScript, Node.js, Web3, performance optimization

Web Developer | Mango House

Jan 2022 - Dec 2023

Freelance contract · Remote

- Built a booking platform handling **80+** daily reservations with integrated payments and third-party service workflows.
- Improved booking speed by **25%** through API optimization, database indexing, and streamlined workflows.

Core stack: React, Node.js, Express, MySQL, RESTful APIs

Unity Developer | La Panqueria

Jan 2021 - Dec 2022

Freelance contract · Remote

- Developed a cross-platform mobile app in Unity/C# focused on brand engagement and customer interaction.

Core stack: Unity, C#, mobile development, UI/UX design

EDUCATION

B.S. in Systems Engineering | Universidad de Medellín, Colombia | Dec 2025

Coursework: Data Structures & Algorithms, Database Design, Software Architecture, Distributed Systems

CERTIFICATIONS

- [IBM: Databases and SQL for Data Science with Python \(2023\)](#)
 - [Ruta N Innovation Marathon Participant \(2023\)](#)
 - [Gunny Games Technical Excellence Certificate \(2024\)](#)
-

ADDITIONAL INFORMATION

Languages: English (Fluent), Spanish (Native), Patois (Native)

Availability: Open to full-time, contract, and consulting
